

# BridgePad™

The Ultimate Wireless Bridge Scoring System

## The BridgePad System

Costs 50% less for the server compared to industry competitors.

Supports Swiss Team Events

Offers optional 2-digit code for confirmation of score by East/West

Does not require batteries for server

Connects by USB port directly to server

Has 4 x 6 lines on the screen and a 25-key keyboard

Comes with a carrying case and all required software

Offers protection of the easy-to-read screen with a cover that doubles as a stand during play

Allows real-time movement synchronization

## Here's Why You'll Never Want to Play Without It Again!

Bridge clubs can save 15% everyday on this unique wireless scoring system compared to other scoring systems.

Only one BridgePad per table is necessary to tally all contracts or tricks won instead of numerous paper travelers.

Players' names only need to be entered once – at the beginning of the game – saving time.

After scoring, players can immediately view an estimate of board percentages, up-to-date results or frequencies.

For each round, the BridgePad shows pair numbers with orientation and boards to be played which helps to avoid incorrect pairings, forgetting to arrow switch, etc.

The BridgePad calculates the score based on the number of tricks won thus avoiding miscalculations.

Throughout the game, an interim ranking and percentage – including across sections – may be displayed.

At any time, the ranks and percentages can be displayed on a computer screen or projected onto a large screen or wall.

There is an option to insist that EW checks the details of the result.

BridgePad identifies any wide variation of the results for the director to check.
